Assignments for Lecture 4

Project Deliverables

a) Construct a set of use cases for your project

b) Choose the use cases that will be implemented in iteration/increment 1. Explain your choice.

c) Construct activity flow diagram(s) for your development process. They should describe the actions team members will take, and their ordering relationships. It should reflect the incremental/iterative approach that we will follow.

Questionnaire

a) Did the use cases help you to better (mentally) simulate the use of your system? i.e. did you think of cases you did not think of? Did it clarify your thinking or description of others? Explain and give examples

b) Was the activity flow diagram a useful development planning tool? Did it help you mentally simulate the actions that your team will perform? Explain.

your program will work? Briefly explain.
