Math 11 Syllabus

Winter 2019

Lecture: Monday, Wednesday, Friday 3:00-3:50pm Ledden Auditorium
Discussion Section: Tuesday 8-9, 9-10, 10-11, 11-12, 12-1, or 1-2 in WLH 2209
Course Webpage: [http://cseweb.ucsd.edu/~dakane/Math11/](http://cseweb.ucsd.edu/~dakane/Math11/)

Professor: Daniel Kane
Email: dakane “at” ucsd.edu
Office Hours: Wednesdays 12:45-2:45pm in AP&M 7131, or by appointment (i.e. if you need to speak and can’t make this time, send me an email and we’ll figure something out).

TAs:
Xingfan Jia Office hours Mondays 8-9pm in AP&M 5218
Jiayi Song Office hours TBA
Zian Wang Office hours Thursdays 12:00-2:00pm and Fridays 10am-12pm in AP&M 6446

Head Lab TA:
Alexander Reed office hours 3:45-5:45pm on Thursdays in AP&M B349.

Course Description: Math 11 is an introduction to probability and statistics. Topics include: events and probabilities, conditional probability, Bayes formula, discrete and continuous random variables, mean, variance, binomial distributions, Poisson distributions, normal distributions, uniform distributions, exponential distributions, central limit theorem, sample statistics, confidence intervals, hypothesis testing, and regression. Emphasis on connections between probability and statistics, numerical results of real data, and techniques of data analysis. Labs will introduce students to the Minitab software package for statistical analysis.

Prerequisites: AP Calculus BC score of 3, 4, or 5, or Math 10B or Math 20B.

Textbook: The textbook for the course will be *Stats: Data and Models* by De Veaux, Velleman, and Bock, 4th Edition. If you purchase the textbook from the bookstore, it will include a copy of MyStatLab. Instructions for purchasing an electronic version of the textbook online are available in TritonEd. If you choose this option, you will have access to the textbook only until the end of the quarter. You can also rent an electronic version of the textbook from [http://www.mypearsonstore.com/bookstore/stats-data-and-models-subscription-9780134175621](http://www.mypearsonstore.com/bookstore/stats-data-and-models-subscription-9780134175621) for $46.
**Exams:** There will be two in-class exams on February 1st, and on March 1st in addition to a final exam from 3:00pm-6:00pm on March 20th.

*Exam Aids:* On exams you will be allowed to use a graphing calculator along with a limited number of pages of notes. You may not use the textbook, and all internet connected devices must be put away.

**Homework:**

*Submission Policy:* Homework will be assigned due each week excepting the first week, and weeks with exams. Homework will be due on gradescope the Friday of the week it is due by 11:59pm. Homeworks will be accepted up to three hours late at a 10% point deduction and will not be accepted later than that, so please make sure to turn your work on time. You should get an email about gradescope registration during the first week of class. If you do not (probably because you added the class late), you can add yourself to the gradescope for the course using code 9PW8V2. To accommodate exceptional situations such as accidents or serious illness, your lowest homework score will be dropped. I will attempt to have new homeworks available on the course webpage at least a week before they are due.

*Collaboration Guidelines:* Students are encouraged to collaborate on homework assignments. You should feel free to discuss the problems with other students or with the course staff. On the other hand, you are expected to write up your solution independently of any collaborators, and you should not share written solutions to homework problems with other students before the homework deadline.

*Use of Outside Resources:* You should not attempt to search for homework solutions online or in sources outside of the course text. You may use such sources as a study guide, but if you accidentally stumble upon a homework solution in such an outside source you should cite it in your homework solution. If your solution proves to be too similar to the cited one, you may lose credit on the problem, however failure to cite the other solution will be treated as academic dishonesty.

**Labs:** In addition, you will be given eight weekly computer labs. These labs will be due on Friday at 9pm each week without an exam. Labs should be submitted on TritonEd by their respective due dates. The information on the labs can be found at [http://www.math.ucsd.edu/~math11/W19.html](http://www.math.ucsd.edu/~math11/W19.html).

*Late Submissions:* Lab assignments can be submitted up to 1 hour late at the cost of a 3-point penalty. Assignments submitted later than this will not be accepted, excepting the first assignment which can be submitted up to a week late for a 1-point penalty.

*Collaboration Policy:* The collaboration policy for labs is similar to that for homeworks. You should feel free to discuss approaches with other students, but the final work should be done on your own. In particular, your final submission should be the result of Minitab computations that you have done on your own, and you should not use graphs produced by other students or share your graphs with other students.

*Plagiarism Detection:* To ensure that students will not copy portions of their labs from other current or past Math 11 students, the software Turnitin.com will be used to detect plagiarism. Therefore, the following policy, quoted from UCSD’s Academic Integrity website, applies to Math 11: “Students agree that by taking this course all required papers will be subject to submission for textual similarity review to Turnitin.com for the detection of...
plagiarism. All submitted papers will be included as source documents in the Turnitin.com
reference database solely for the purpose of detecting plagiarism of such papers. Use of the
Turnitin.com service is subject to the terms of use agreement posted on the Turnitin.com
site.”

**Additional Resources:**
The teaching and learning center is providing some additional learning resources for
interested students:
*Drop in Tutoring:* The Teaching and Learning Center will run drop in tutoring sessions
Monday through Friday from 12pm to 8pm.

*Supplemental Instruction:* Supplemental Instruction sessions will be held every Monday
and Wednesday 11:00-11:50am in TLC 1504 and every Friday 12:00-12:50pm in Center 316
starting on Wednesday, January 9th.

For more information on these additional resources visit [http://commons.ucsd.edu/students/tap/index.html](http://commons.ucsd.edu/students/tap/index.html)

**Academic Integrity:** Academic integrity will be taken very seriously by the course staff.
Breaches of integrity may have broader consequences outside of the assignment in question.
The following will all considered to be breaches of academic integrity:

- Collaboration on homeworks or labs beyond the scope outlined in the section above
  (including sharing of homework solutions with other students before the homework
deadline).

- Collaboration or copying on exams of any kind.

- Attempting to look up homework or lab solutions online. Failure to cite such solutions
  if found incidentally.

- Use of aids on exams outside of explicitly allowed materials.

- Posting of homework or lab solutions or sharing them with future Math 11 students.

For further information on course academic integrity policies see: [http://www.math.ucsd.edu/~math11/integrity.html](http://www.math.ucsd.edu/~math11/integrity.html)

**Grading:** Course grades will be determined using the following breakdown:

- Homework: 15%
- Labs: 20%
- Midterms: 2 × 15%
- Final: 35%

I will attempt to keep the grade distribution for this class similar to what it has been
historically for Math 11 (though I may adjust this slightly if I am particularly impressed
or disappointed with the class as a whole). Your grade will be determined relative to other
students in the class, but the exact standing required for a given letter grade is not decided
in advance.
Schedule: Below is a rough schedule for topics covered in the class:
Week 1: Summarizing Data, Correlations, Linear Regression (Chapters 3, 4, 6, 7)
Week 2: Linear Regression, Introduction to Probability, Conditional Probability, Independence (Chapters 8, 9, 13, 14)
Week 3: Bayes’ Rule, Random Variables (Chapters 14, 15)
Week 4: Geometric, Binomial and Poisson Distribution, Exam 1 (Chapter 16)
Week 5: Continuous Distributions, and Normal Distribution (Chapter 5 and handout)
Week 6: Surveys, Sampling Distributions, Central Limit Theorem, Confidence Intervals for Proportions (Chapters 11, 16.4, 17, 18)
Week 7: Hypothesis Testing for Proportions (Chapters 19)
Week 8: Confidence Intervals for Means, One-Sample t-tests, Exam 2 (Chapters 20, 21)
Week 9: Two-Sample t-Test, Paired t-Test, Regression Inference (Chapters 22, 23, 25)
Week 10: Regression Inference, Chi-Squared Test, Review (Chapters 24, 25)
