

CSE 91 HW8

For this assignment, every student will need to create their own submission. However, you may collaborate with at most one other student and submit separate assignments for each of you.

The goal of this assignment is to make a web app using the app2you interface. Your web application should contain at least two pages, one with a submission form and one with a report page that shows the submissions. You are welcome to make any kind of website you want. The instructions below will show you how to make a homework submission website like the one that the instructor demonstrated how to build in class. Some other ideas include a recipe submission web site or a party invite web site. Feel free to experiment.

Make sure you read and follow the second to last instruction! If you do not unlock your application and then add me as an owner, then I cannot grade it and you will receive a 0. Regardless of what kind of website you build, you must add me to the owner's list for me to be able to see it and grade it.

- (1) Go to <http://www.app2you.com/login> and sign up for an account using your student email with the form on the right
- (2) You should be sent an email shortly to confirm your account. Follow the instructions in that email.
- (3) Login to app2you.com using your email and the password you created. Create a new application.
- (4) Click 'create a new page' and select the type form page. Name the page 'submission' and use the same name for the URL. This will bring you to an empty page.
- (5) Double click the 'single line text' field and the 'file upload field' to add these to your form
- (6) Click the gear icon next to the submit button and configure the pages submission options so that each user can only submit one record.
- (7) Click on the 'page settings' button at the top of the screen and change access rights to 'everyone (no login required)'.
- (8) Click the 'create new page' link on the left side of the screen. Choose the 'report' option and name it as you would like

- (9) On the report page, double click the single line text and multi-line text field to add these to your report. Rename the fields 'comment' and 'grade'.
- (10) Make sure the access rights for the report page are set to 'owners only'
- (11) From the toolbar at the top, change the application status from 'locked' to 'unlocked'. Then click on the 'settings' button in the toolbar. On the 'general' tab, click 'add owner' and enter 'jacob.lyles@gmail.com', then click on the 'add' link.
- (12) Congratulations, you have now built a functional web-app! You should be able to log out and visit the URL of your app to use it. However, you will not be able to see the report page until you log back in.
