

# Project 2 Turn-In Instructions

**Due Thursday, December 8th by 12 PM (noon) San Diego Time**

## Requirements

You will submit exactly one (1) file named: `sender.c`. **No other files will be collected.** This file must completely implement all of the functionality described in the Project 2 assignment and should be compatible with the rest of the project files given in <http://cseweb.ucsd.edu/classes/fa11/cse123-a/Project2>. Please read the assignment carefully and make sure that your programs behave exactly as specified.

## Compiling

Your programs may use includes from the standard C library, but must not depend on any other `.c` or `.h` files. Your code must compile using the provided Makefile. Please make sure that your code compiles properly on `ieng6`, since this is where we will be running the grading scripts.

## Turn-In Procedure

**Step 1:** Prep your account for turn-in:

```
$ prep cs123f
```

You will know your account is properly prepped if your `$PREPLABEL` environment variable is set to `cs123f`:

```
$ echo $PREPLABEL
cs123f
```

**Step 2:** In the directory containing your `sender.c` file, run the `bundle` command for project 2 and follow the prompts:

```
$ bundleP2
```

**Note:** You can re-run `bundleP2` at any time to re-submit your project; your latest submission will overwrite any previous submission.
