

- 1.2 Use the mapping of voltages to 2-bit encodings from Exercise 1.1. for this problem. You are given a digital encoding of an audio signal as follows: 1111101001010000. Plot the re-created signal with time on the x-axis and voltage on the y-axis. Assume that each encoding's corresponding voltage should be output for 1 millisecond.
