Today's learning goals

Sipser Section 1.4

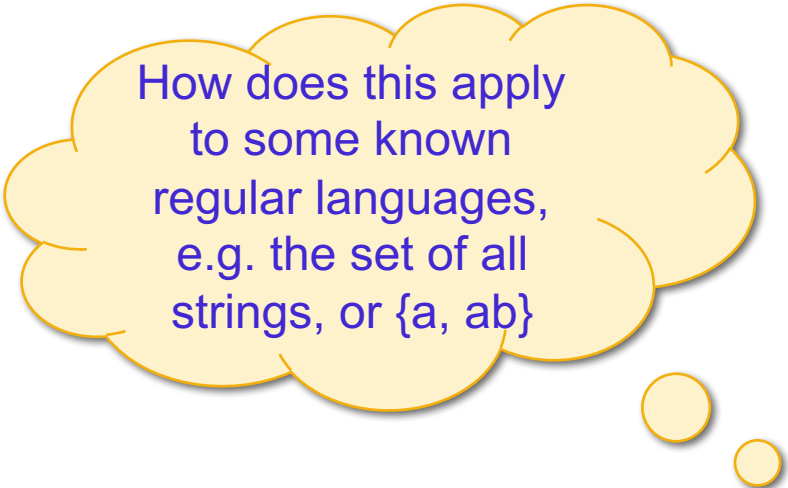

- Apply the Pumping Lemma in proofs of nonregularity
- Identify some nonregular sets

Pumping Lemma

Sipser p. 78 Theorem 1.70

If A is a regular language, then there is a number p (*the pumping length*) where, if s is any string in A of length at least p , then s may be divided into three pieces, $s = x y z$ such that

- $|y| > 0$, and
- for each $i \geq 0$, $xy^iz \in A$,
- $|xy| \leq p$.

How does this apply to some known regular languages, e.g. the set of all strings, or $\{a, ab\}$

Using the Pumping Lemma

Claim: The set $L = \{0^n 1^n \mid n \geq 0\}$ is not regular.

Using the Pumping Lemma

Claim: The set $L = \{0^n 1^n \mid n \geq 0\}$ is not regular.

Proof: Consider an arbitrary positive integer. WTS p is not a pumping length for L .

How? Want to show that there is some string that *should* be pump'able but isn't.

Conclude that L does not have any pumping length and is therefore not regular.

Using the Pumping Lemma

$L = \{0^n 1^n \mid n \geq 0\}$ **CLAIM:** p is not a pumping length for L .

How would you prove the claim?

- A. Find a string with length $\geq p$ that is not in L .
- B. Find a string with length $< p$ that is in L .
- C. None of the above.

$$\exists s (|s| \geq p \wedge s \in L \wedge \forall x \forall y \forall z ((s = xyz \wedge |y| > 0 \wedge |xy| \leq p) \rightarrow \exists i (xy^i z \notin L)))$$

Using the Pumping Lemma

$L = \{0^n 1^n \mid n \geq 0\}$ **CLAIM:** p is not a pumping length for L .

WTS

$\exists s (|s| \geq p \wedge s \in L \wedge \forall x \forall y \forall z ((s = xyz \wedge |y| > 0 \wedge |xy| \leq p) \rightarrow \exists i (xy^i z \notin L)))$

Find a string s such that

1. $|s| \geq p$
2. s is in L
3. No matter how we cut s into three (viable) pieces, some related string obtained by repeating the middle part falls out of L .

Using the Pumping Lemma

Claim: The set $L = \{0^n 1^n \mid n \geq 0\}$ is not regular.

Proof: Consider an arbitrary positive integer. WTS p is not a pumping length for L .

Consider the string

$$s = 0^p 1^p.$$

1. $|s| \geq p$?
2. s is in L ?
3. No matter how we cut s into three (viable) pieces, some related string obtained by repeating the middle part falls out of L ?

Using the Pumping Lemma

Claim: The set $L = \{0^n 1^n \mid n \geq 0\}$ is not regular.

Proof: Consider an arbitrary positive integer. WTS p is not a pumping length for L . Consider the string $s = 0^p 1^p$. Then, s is in L and $|s| = 2p \geq p$. Consider any division of s into three parts

$$s = xyz \text{ with } |y| > 0, |xy| \leq p.$$

Since $|xy| \leq p$, $x = 0^k$, $y = 0^m$, $z = 0^r 1^p$ with $k+m+r = p$,

and since $|y| > 0$, $m > 0$. Picking $i=0$: $xy^i z = xz = 0^k 0^r 1^p = 0^{k+r} 1^p$, which is not in L because $k+r < p$. Thus, no p can be a pumping length for L and L is not regular.

Proof strategy

To prove that a language L is **not** regular

- Consider arbitrary positive integer p .
- Prove that p isn't a pumping length for L .
- Conclude that L does not have any pumping length and is therefore not regular.

Another example

Claim: The set $\{a^n b^m a^n \mid m, n \geq 0\}$ is not regular.

Proof: Consider an arbitrary positive integer. WTS p is not a pumping length for L .

Consider the string

$$s = ???$$

1. $|s| \geq p$?
2. s is in L ?
3. No matter how we cut s into three (viable) pieces, some related string obtained by "repeating" the middle part falls out of L ?

Aside...

To complete proofs with Pumping Lemma, we will need to build (useful) examples of strings with **length $\geq p$** that are **in** a given language.

- $L1 = \{a^n b^m a^n \mid m, n \geq 0\}$
- $L2 = \{ ww \mid w \text{ is a string over } \{0, 1\} \}$
- $L3 = \{ ww^R \mid w \text{ is a string over } \{0, 1\} \}$

Another example

Claim: The set $\{a^n b^m a^n \mid m, n \geq 0\}$ is not regular.

Proof: ... You must pick s carefully: we want $|s| \geq p$ and s in L and s "can't be pumped"

Which **other** choices of s could we have used in the proof?

- A. $s = a^p b^p$ B. $s = aba$ C. $s = a^p b^p a^p$ D. $s = b^p$
E. None of the above

And another

Claim: The set $\{w w^R \mid w \text{ is a string over } \{0,1\}\}$ is not regular.

Proof: ... You must pick s carefully: we want $|s| \geq p$ and s in L and s "can't be pumped" ... **Consider $i=...$**

Which s and i let us complete the proof?

- A. $s = 0^p 0^p$, $i=2$ B. $s = 0110$, $i=0$ C. $s = 0^p 110^p$, $i=1$ D. $s = 1^p 001^p$, $i=3$
E. I don't know

How do we choose i ?

Claim: The set $\{0^j1^k \mid j,k \geq 0 \text{ and } j \geq k\}$ is not regular.

Proof: ... You must pick s carefully: we want $|s| \geq p$ and s in L and s "can't be pumped" ... **Consider $i = \dots$**

Which s and i let us complete the proof?

- A. $s = 0^p1^p$, $i=2$ B. $s = 0^p1^p$, $i=p$ C. $s = 0^p1^p$, $i=1$ D. $s = 0^p1^p$, $i=0$
E. I don't know

Do we always need Pumping Lemma?

Claim: The set

$\{w \mid w \text{ has different \#s of 0s and 1s OR has a 1 before a 0}\}$
is nonregular.

Proof:

Regular sets: not the end of the story

- Many **nice / simple / important** sets are not regular
- Limitation of the finite-state automaton model
 - Can't "count"
 - Can only remember finitely far into the past
 - Can't backtrack
 - Must make decisions in "real-time"
- We know computers are more powerful than this model...

Which conditions should we relax?

For next time

- Work on Practice questions for Exam 1
- **Exam 1** April 25, in class
 - Seat assignments on Piazza
 - Review: in-class on Monday and Monday evening 7-9pm GH 242
