

CSE 140L

Online Turnin Guidelines and Tutorial

The electronic turnin of Lab work is through WebCT. You will be added into the WebCT group for CSE 140 soon (please check your account sometime next week using the steps listed below in order to make sure that you have been added). Log you're your account and submit your files using the assignment tool provided to you. You are allowed to work in teams of two. While submitting your files on WebCT, submit from only one account but make sure you include the names and PIDs of both team members in the lab reports.

- Step 1: Point your browser to <http://webct.ucsd.edu>
- Step 2: Log in using your username and password
- Step 3: Once you are in, click on CSE 140L under Summer 2009 to enter the class website
- Step 5: Now that you are inside the class home page, click on the "Assignments" link
- Step 6: You will see the labs lined up. Click on the lab you want to make a submission, i.e. lab1.
- Step 7: In the "submit assignment" part, click "upload file". A new window will open for you to browse your files and upload them.
- Step 8: If you made a mistake and uploaded the wrong file, you can select the file you want to change from the file list and click "remove files".
- Step 9: When you finish uploading your files, click "Submit Assignment" button at the very bottom. You can also enter your e-mail to get a confirmation e-mail.
- Step 10: You will see "assignment submission confirmed". Now you can log out.

****Remember that you can upload your project multiple times, but that there is a time stamp associated with the file manager and any files found that have a time stamp after the deadline will be treated as late.**
