

WES 237A Script Execution Guide

1. Overview

As part of project 1, you will need to collect data logs for phone usage. This guide will help you get started.

2. Minor Details

When the phone turns on, you may see the following message. If so, hit “Ok” and move on.

3. Clock Synchronization

Find the ClockSync app, and run it. This will allow you to make sure the log timestamps are correct.

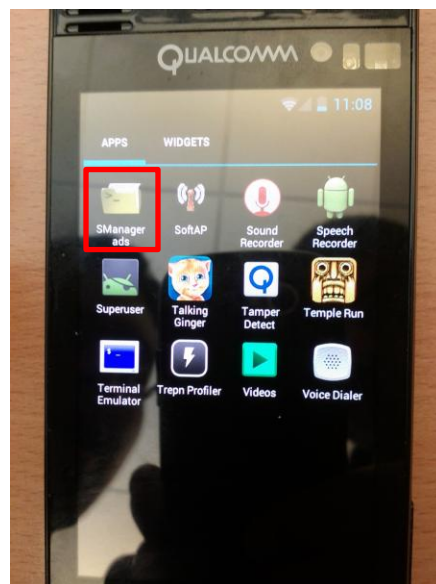

Note: *This app needs to have WiFi connectivity*

4. Download the scripts

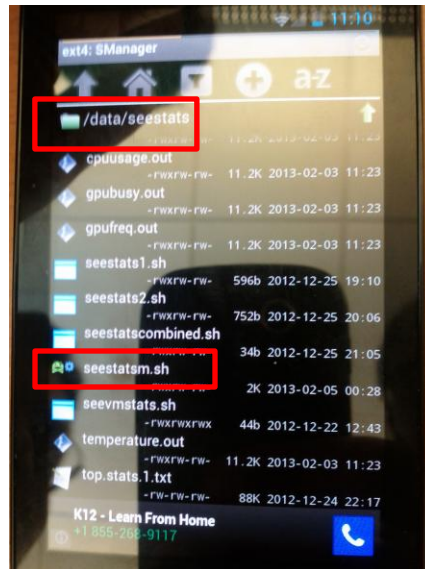

Place the scripts in /data/seestats.

- a. You can do this using the file manager when connected to your PC, or using the “**SManager ads**” app

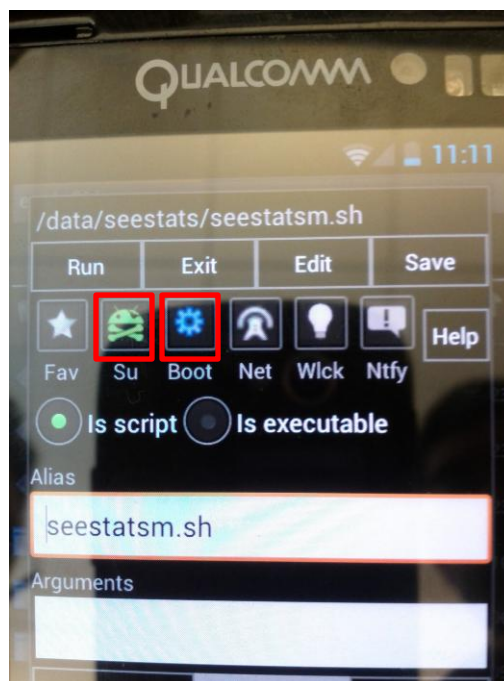

5. Set Script Settings

Open the “**SManager ads**” app, and locate your scripts (in /data/seestats)

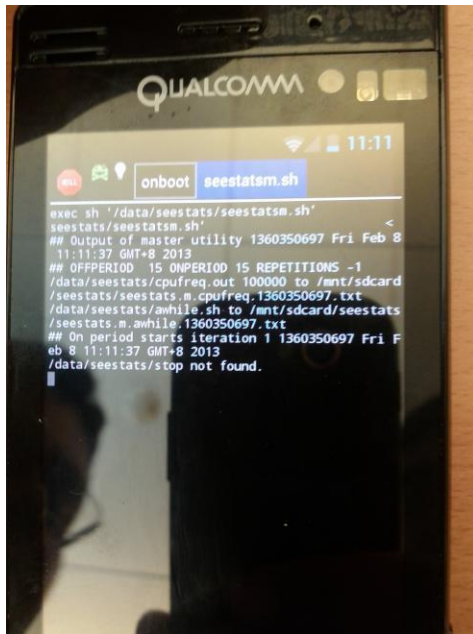

A. Auto-run a script (executes on boot)

One script (we will tell you which is which) will run on startup. Edit that script within **SManager**, and change the setting to enable both “boot” and “su”.

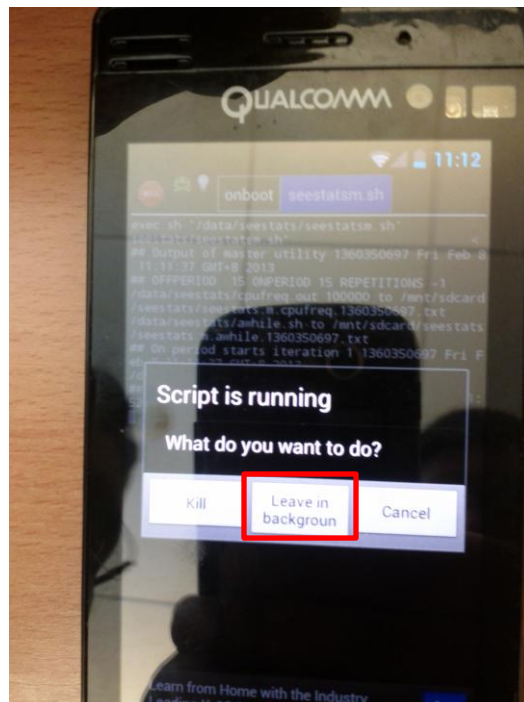

B. Execute a manual script

To execute a script, select it and **run** the script. The script should begin execution, as below:

Use the “←” touch button to exit **Smanager**, upon which you will be given a prompt:

Allow the script to “Run in background”.
