|------------------------------------|--|---|
| <b>Education</b>                   | <b>University of California, San Diego</b> , La Jolla, CA<br>Ph.D., Computer Science (GPA: 4.0/4.0), Advisor: Sorin Lerner<br>Thesis: “Language-based Security for Web Browsers”<br><br><b>Korea Advanced Institute of Science and Technology (KAIST)</b> , Daejeon, South Korea<br>M.S., Computer Science (GPA: 3.9/4.3), Mar 2009, Advisor: Kwang-Moo Choe<br>Thesis: “Pointer Analysis for JavaScript”  | Aug 2014 (Expected)   |
| <b>Experience</b>                  | <b>Google</b><br>Seattle, WA<br>Implemented a security module that blocks illegal cross-site access from HTML renderer processes in Chrome; conducted a thorough evaluation of the module to measure its effectiveness over Chrome’s beta testers; deployed the module in the Chrome browser.<br><br><b>Mozilla Corporation</b><br>Mountain View, CA<br>Prototyped a JIT-enabled taint tracking engine for JavaScript built on Firefox’s JS engine; being recommended for a scholarship opportunity by Mozilla with the success of the intern project.<br><br><b>University of California, San Diego</b><br>La Jolla, CA<br>Designed and taught weekly recitation sessions for introducing OCaml, Python, and Prolog to undergraduate students taking Programming Languages (CSE130); Supervised more than 100 students.   | Software Engineering Intern @ Chrome Security Team<br>Summer 2013<br><br>Research Intern @ Mozilla Labs<br>Summer 2011<br><br>Teaching Assistant<br>Winter 2012, Spring 2013, Fall 2013 |
| <b>Publications<br/>(Selected)</b> | <b>SafeDispatch: Securing C++ Virtual Calls from Memory Corruption Attacks</b><br>Dongseok Jang, Zachary Tatlock, Sorin Lerner. NDSS 2014<br>Developed an extended C++ compiler that secures virtual function calls via code instrumentation; developed a modified Clang++ compiler for code instrumentation and LLVM passes for optimizing instrumented code.<br><br><b>Establishing Browser Security Guarantees through Formal Shim Verification</b><br>Dongseok Jang, Zachary Tatlock, Sorin Lerner. USENIX Security 2012<br>Developed Quark, a multi-process web browser with a browser kernel formally verified to be tamper-proof; built a full-fledged research browser based on existing components that actually works on real websites including Gmail, Google Maps, and Facebook.<br><br><b>An Empirical Study of Privacy-Violating Information Flows in JavaScript Web Applications</b><br>Dongseok Jang, Ranjit Jhala, Sorin Lerner, Hovav Shacham. CCS 2010<br>Found real cases of JavaScript history sniffing attack on 46 popular websites; authored a paper on the findings which was covered in major newspapers including Forbes, The Wall Street Journal, Slashdot, etc.; Implemented a security enhanced JavaScript engine that detects information theft using taint tracking. |   |
| <b>Technical Skills</b>            | C, C++, Python, JavaScript, Java, OCaml, Compilers, Web Browser Security   |   |
| <b>Additional<br/>Information</b>  | <b>Visa Status</b> : F1 (Student)<br><b>Country of Citizenship</b> : South Korea<br><b>Languages Proficiency</b> : Korean (Native), English (Fluent)   |   |
